The Indian government has made a clear commitment towards industrial growth and protection of the environment. Also, the private sector is increasingly interested in adopting modern processing techniques for clean and resource-efficient industrial production.

Objective

Sustainable and Environment-friendly Industrial Production project aims to support the Indian public and private stakeholders in jointly implementing strategies for efficient, environment-friendly, and climate-friendly industrial development.

APPROACH

SEIP is a joint project with the Ministry of Environment, Forest and Climate Change (MoEFCC) within the framework of the Indo-German Technical Cooperation. The project works on mitigating selected environmental problems of national importance with focus on industrial production.
waste water and solid waste management. The project aims at demonstrating solutions on reducing acute environmental pollution and improving resource efficiency in industrial production for which technical solutions and business and management models can be showcased with positive results and direct impact on improving the environmental conditions at the selected sites. Further on, the cases can serve as models to be replicated nationwide subsequently.

The project activities are grouped into the following three areas:

- environment-oriented modernisation of three industrial areas (showcasing solutions),
- establishing appropriate framework conditions at the national and state levels, and
- knowledge management and dissemination.

The project activities are focused to waste water conveyance, treatment, recycle and reuse, waste management, monitoring, process modification in individual industries etc. These will be complemented by training and skills development and by setting up of a virtual platform that offers exchange of best practice technologies.

At the central and state level, the project will support the creation of an enabling framework by suggesting measures on new policies, plans, and support programmes to prevent and reduce pollution and improve resource efficiency in industrial zones.

The project will include and engage actors such as industry associations, operators of industrial sites and companies, and relevant entities at the central and state level at various stages. Slowly but steadily, women are emerging as the change-makers in the context of environment-friendly behavior change. Hence, the project will create practical women-oriented examples of management and planning for sustainable industrial zones.

States selected for this project are Uttarakhand, Gujarat, and Delhi.

**EXPECTED ACHIEVEMENTS**

The project is expected to provide a demonstration of the possible means and ways to make industrial development efficient, environment-friendly, and climate-change-resilient.

The project aims to achieve the following results:

- decrease in pollution by an average of 20 percent in the surroundings of three industrial sites.
- launch of development programmes and promotional guidelines that aim at increasing resource efficiency and reducing pollution in selected states.
- launch of two additional compulsory central government policies, plans and/or programmes, and measures to prevent and reduce pollution as well as improve resource efficiency in industrial zones.
- adoption of best practices through technology and management methods for an efficient, environment- and climate-friendly industrial development in 10 industrial zones.
- provision of two additional practical examples regarding management and planning methods of sustainable industrial zones that support women.
